Antibody rapid test Covid-19. IgG / IgM

Antibody rapid
test Covid-19

Covid-19 test

Newgene Covid-19 Antibody IgG / IgM Rapid Test (whole blood from the fingertip) was compared with a leading commercial PCR; the results show that the rapid test Corona 19-nCoV IgG / IgM cassette rapid test (whole blood from the fingertip) has a high sensitivity and specificity. The test consists of two components: an IgG component and an IgM component. In the IgG component, the IgG test line area is coated with human IgG antibodies. The advantages speak for themselves:

- 10-15 minutes for results
- Easy to handle
- Test can be carried out anywhere
